Created and tested in Colorado, our two doctors applied two life times worth of experience to provide an affordable solution to protecting isolated elderly.

Bio-Century Group “The Future of Elderly Care” Family Member, Friends and Facility Release

Bio-Century Group, a leader in AI solutions is proud to announce a **“New Technology designed for the National Assisted Living System”**. After several years of research we have developed an AI based service that will assist managers, workers, patients and family members to provide informed high quality care to all being monitored.

Our service is based on a “Biometric Recorder” of our design. Only available here!

Our monitoring is an advantage to both the facility and the clients of assisted living centers. Transparency never thought possible, is available through our service.

Family members, Friends and the facility personal receive weekly AI analysis to ensure their needs are being met. We monitor health, wellness and comfort through our “Live Life Pattern Charts” using an expert AI.

Our technology puts family members and the facility on the same side and problems are easily recognized in days not weeks. Litigation can end, better care can begin!

This is not a medical system or device, it is a ...

Standalone Biometric Living Space Monitor

Our science has no current equal.

We offer a very affordable living space installed AI service, a safety net for all elderly living alone at any location.

The following pages explain our science and its new advantages.

Bio-Century Group Breakthrough tested and ready

Standalone Biometric Living Space Monitor

Is a single box that easily installs in a client home or room, it hangs on a wall, it's silent and has a 20 year lifespan, it's own backup power, requires no maintenance, installs at a facility or home in min's. A family member can provide custom Face Art and hang it as a gift to their loved one in any facility or home.

24 hour “live life pattern” metric monitoring is the “State of the Art” in protective elderly care for caregivers, facilities and family's. When they live alone, anywhere, you can have peace of mind using our live service.

Bio-Century Model 201 Biometric geo-located recorder (Installs on location)

The Biometric Sensor box records **three environmental factors** temp, humidity and gas. Our gas detector being no cheap smoke detector reads CO and CO2 along with all other heavy gasses. It records **three activity conditions** light, sound and motion.

Bio-Century User Interface (Any web enabled device can be used)

We developed a simple graph that shows the environment and activity for the last 24hrs. Biometric recording is not Video/Audio recording or anything like it. Biometric recordings are accurate environmental data stored and uploaded every 15min.

When a light is turned on, when a door is opened, when a sound is made, we capture these real time events to create a pattern of activity for that patient.

Anyone without training can read our life pattern charts. Our pattern charts require no specific language to understand, truly a global interface!

Absolute Privacy

Video and Audio devices reduce the privacy of the patient to zero and usually are infrequently viewed on the monitoring end. Biometric recording is 24 hours a day and is 100% secure and private. 100% privacy is guaranteed by design.

Bio-Century Group Network and Home Tech

Secure Global Network Allows Patient Mobility

Our Cloud based storage uses “Secure Token Identity” assigned to each Patient. This allows patient’s to move to other facilities and we transport their living patterns with them. When moving from their home to a facility they take their Bio-Century patterns with them to their new room or if the facility has Biometric Monitoring the living patterns can be transferred to their new room at no charge.

Free secure access to the Live Charts

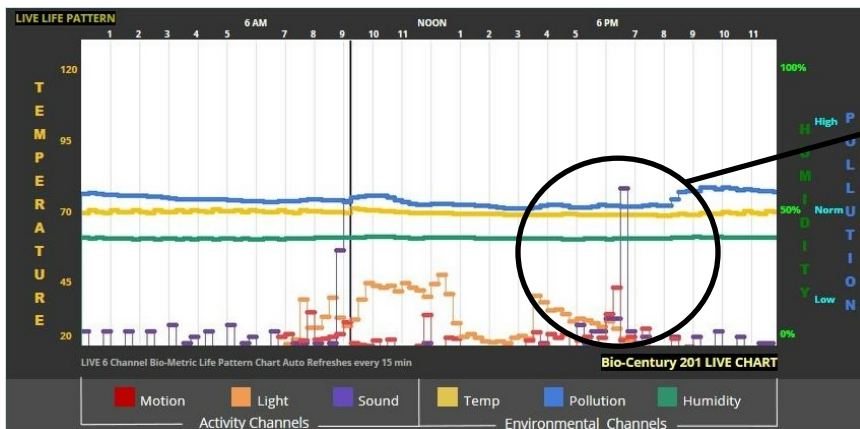

This portable method keeps the real identity of a person private and our system does not use real world identity information at all. When logging into the Web interface, our assigned ID is used to connect to a client/patient live life pattern chart. **Any number of family and friends can view at the same time, free to all.**

Verify activity is occurring

Our 24hrs graphic charts are exact timed to the second, with a quick glance, so the family member can be assured that normal activity is occurring, when expected.

Any entry to a monitored room is recorded through the light variations as sound increases and motion increases in the room. If a care giver has entered the room you see 100% proof that care is being provided to your loved one.

No more doubt, if a visit occurred, you see the proof.

Bio-Century Group Biometric Recordings

The Metric Experience

A family member, can have home security or baby video/audio monitors available to them. We recognize Life Alert as a quality product but its scope is too limited to address the issues in Assisted Living Centers and elderly living at home alone.

Our 2021 technology has at it's core a proven AI controller. We offer a high tech solution thru Biometric charts. Health, Wellness and Comfort are monitored.

A three day recording makes it all too clear that humans are creatures of habit. We rise each day and process in our living space at our own unique pace. Biometric recording watches not only the environment but also the activity.

Looking at our report chart connects the family or caregiver to the patient in a min by min chart of activity. Mom gets up at six, opens the curtains to let in light. Its all there, every detail that shows a loved one is active.

When normal activity can be determined by the SALBOT-s11, it is used to then create intelligent alerts when normal activity is not being recorded. If mom has not gotten out of bed for two days you would receive an alert. It's always better to be safe than sorry. This is a "State of the Art" feature of Biometric recording.

Family members connect in a new way that makes them feel closer to their loved one and elderly parents feel safer. Peace of mind is achieved through our science.

Only Biometric pattern analysis allows 100% security, 100% privacy and a higher quality monitoring than other Video/Audio systems.

The Legal View:

Our new science is based on hard data collected by a high accuracy data acquisition device. The information collected is scientifically accurate and of a quality that can be used in litigation mediation.

Bio-Century Group SALBOT-s11 AI an advanced solution

Meet SALBOT-s11

Bio-Century has its roots in the original AIIS (Artificial Intelligence Information Systems) company of Colorado, starting in 1986 and is an authority over AI system design and training.

The SALBOT series is used in many of our world's largest industries to control processes that are too complex for humans. We took on the challenge of creating not only the software needed, but also giving the AI real world input so it could make critical decisions from our real assisted living world.

The Bio-Century Biometric Recorder is the real world device our AI uses to create patterns of activity for every box connected to the system. A single SALBOT can monitor millions of persons simultaneously. So what is a SALBOT?

SALBOT stands for:

Simulated Androidien Logic Binary Operator Technology © 1986

It is a creation of Jonesoft AI systems and now part of the Bio-Century family of products. This SALBOT expert system is based on Prolog Object, Predicate and Domain logic.

We have trained the SALBOT sibling 11 unit to observe living environments and seek pattern anomalies in the day to day activity of a monitored room.

From this multi level logic unit we can accurately predict and set alert points that are tuned to each patients schedule and habits.

This level of constant care has never been available till today. Using the advanced logic of the SALBOT series AI units, we can help care givers spot problems with patients before they become critical.

If a facility does not have Biometric monitoring anyone can order a unit and we will install it, then you have SALBOT-s11 watching over a loved one.

Bio-Century Group Facility Staffing Wizard w/ Litigation Defense

Stop litigation with proof of care!

Command center can be used in locations that use the Bio-Century in every room. It has a 32" screen and shows up to 100 rooms under monitor in a single view.

Because the room based boxes independently upload data to our secure server, the same data the family member can view is available to the facility staff.

The display is color coded to activity increase, so you see your staff moving around the facility in real time. This can be very helpful when scheduling daily activity.

When a staff member enters a room, it's a scientific fact that activity and room environment are affected. It is a scientific fact that we record the metrics of the room accurately. The proof of staff activity is recorded and can also be used in legal proceedings.

You watch as the staff enters room after room in a scheduled pattern. Its being recorded real time by Metrics, this is a great advantage we give to management. The time in the room is easily viewed in the real time chart that family members can also view. No doubts about care activity ever.

Never be blind sided by accusations again because Biometric Charts can't be faked. You will have the irrefutable proof to stop law suites before they start.

Time to change

Offering Biometric Recording of the living space a family members loved one will be in, is a standard expected to spread industry wide. These recordings show a facility's interaction with patients without any staff or patient privacy issues at all.

Proof positive, care is being provided!

We've put body camera's on police because it is the best solution for that problem. We have created Biometric Recorders to help solve problems in the Assisted Living industry.

Management must unfortunately address the increase of litigation against facilities. By installing Biometric Recorders you gain proof positive that care activity did occur. It is the science that can tip the now unbalanced scales of justice.

Bio-Century Group
Serving the elderly at any location

Review / Price

Bio-Century Group

In Review and Monthly Fee

Regular \$99.95 a month

Introductory offer “50% OFF” as long as you keep the service!

Only \$49,95 a month. No Contracts, No money required at order.

This is a new technology to solve a decades old problem. It's the technology that allows us to all to work together improving the Assisted Living industry.

By design 100% patient privacy, 100% patient identity is provided.

24hrs a day Biometric recordings are created and can be transferred w/ patient.

AI based intelligent pattern deviation alerts are designed to protect a loved one.

Facility care activity is verified in real time.

Family Members

There will be an end to guessing about the care a loved one is getting. If a facility does not have Biometric Recording available, order a monitor and well install it. Be connected to a love one in a real way that's non invasive. Be part of their daily life by viewing their activity, it provides daily peace of mind.

Facility Owners and Managers

Our Biometric Recording system elevates your facility to the best it can be. You can allow transparency of the facilities activity. When care is lacking, a targeted action can be taken to correct the problem.

Litigation can be halted with the proof your facility is providing the activity of care.

Viewing a patients pattern slow down allows preventive care before a condition gets critical. Biometric recording is a must have system.
